

Load Sea/Land Containers in Less Than One Hour

Fast filling of sea/land containers with maximum payload is possible with Young Industries SwallowTail™ container loading system. This high capacity Sea/Land container loading systems uses TransFlow® technology and is designed for loading TIO2 and other difficult to handle materials. The two types of SwallowTail™ container loaders offered are the stationary and portable designs. Both are used to fill 20, 30 and 40 feet long lined sea/land containers at filling rates of 40,000 pounds per hour or more.

TIO₂ Sea/Land Container Filling Facility

Fills Container to 97 - 99% of its Total Capacity

The major advantage of the Young Industries SwallowTail™ Container loader is that it can to fill the container to 97 - 99% of its total capacity. This means you will get 20 to 30% more product into the container with the SwallowTail™ container loader as compare to other methods. It is like having free shipping of your product for every fourth container you ship.

The SwallowTail™ container loading system features and benefits are:

- **Fast turnaround with filling rates greater than 40,000 lbs per hour.**
- **No dead spots fills 97 to 99% of the container**
- **Maximum payload per container**
- **Quick connection to container**
- **No moving parts**
- **Fill 20', 30' and 40' lined containers**
- **Stationary and portable designs available**
