

# High Volume Bulk Bag Unloading System

Patent Applied For

Young Industries now offers Bulk Bag Unloading Systems specifically designed for the *High Volume User*. The system consists of a storage hopper capable of holding the contents of one or more bulk bags. A large access door is provided in the hopper for operator access to the bag discharge spout. The heart of the system is the Self-Contained Filtration System with integral fan and continuous-cleaning pulse jet filter. The filter creates a continuous suction around the bottom of the bag through a specially designed dust collection chamber (*patent applied for*).

The system can be equipped with metering, weighing and mechanical or pneumatic conveying equipment at the hopper discharge.
