BULK BAG LIFTING BRACKET LOAD TEST

**ADVANCED
TECHNOLOGY
PROVEN DESIGN**

Young Industries manufactures a variety of bulk bag unloading systems that utilize a hoist to lift and position the bag. Lifting brackets for strap type bulk bags are designed, manufactured, and tested to meet the 4000 lb. rating of the system. We manufacture several types of bulk bag lifting brackets. All our lifting brackets are tested as required by OSHA Rigging and Material Handling standards.

Young Industries lifting brackets comply with OSHA code 1926.251 and 1926.251 (a)(4). Each bracket is load tested with a weight equal to 125% of the lifting bracket rating. The photo on the left shows our Low-Profile Lifting Bracket with 10" offset being load tested with a 5000 lb. test weight. The lifting bracket will be used for a maximum lift of 4000 lbs.

Young Industries Bulk Bag Lifting Brackets meet or exceed OSHA Rigging and Material Handling standards to assure operator safety.
